3) Practice for final project defense presentation

- 3.1 the implemented tree was n-ary old, and the complexity of the search operation is $T(n)=n+T(n-1)+n= T(n)=2n+T(n-1)= T(n)=n+T(n-1)$
 3.2 yes, because an AVL tree will be implemented, which its operations in the worst case are logarithmic.
 3.3
 3.4 $T(n)=T(n/2)+T(n/2)+c = T(n)=2T(n/2)= T(n)=2T(n)$
 3.5 Applied for point 3.4, not 3.3: n = number of tree nodes.
